**1. Course Description:**

This course deals with the design of analog filters like Butterworth, Chebyshev, Elliptic., digital filter design for both IIR & FIR filters. Different filter structures for the realization of digital filters will be discussed. Finite word length effects and Multirate DSP will be introduced. DSP Processor architecture and implementation of DSP algorithms will be part of the course, which will be emphasized upon.

**2. Scope and Objective:**

The course aims at enumerating the theoretical and practical aspects of modern signal processing in a digital environment. It also aims at discussing application areas with particular stress on speech and image data.
