INSTRUCTION DIVISION
FIRST SEMESTER 2017-2018
Course Handout Part II

Date: 24/07/2019

In addition to part -I (General Handout for all courses appended to the time table) this portion gives further specific details regarding the course.

Course No. : CE G612
Course Title : Advance Steel Structures
Instructor-in-charge : Dr. Mohan S C

Scope and Objective of the Course:

Scope: This course deals with the analysis and designs of steel structures covering advanced topics on beam, beam-column, plate girder, composite beams and columns, moment-resistant framed connections, and industrial structures including consideration of high strength steel, loads and environmental effects, torsion, lateral-torsional buckling, plastic design, design for fatigue, and fire resistant design. Moreover, discussion on tall steel buildings and detailing in steel structures along with design of bracings has been made. Design is based on Load Resistance Factor Design Approach and/ or Limit State Design Approach.

Learning Objectives: After the successful completion of this course, the students should be able to:

1. analyze the plastic capacity of framed structures and design them by considering the local plate buckling effects.
2. design steel members for flexural-torsional, and lateral torsional buckling
3. design of plate girders and gantry girders through design example
4. design of beam, beam-column, and frame bracings along with connections to provide structural stability
5. design of industrial building systems and special structures such as Chimney may also be considered in the form of special project.

Student Learning Outcomes (SLOs) assessed in this course – (a), (c), (f), and (k).

Text Book:

1. N. Subramanian, "Design of Steel Structures", Oxford University Press, December 2015.
2. Teaching Resource for Structural Steel Design, Volume 1, 2 & 3. Institute for Steel Development & Growth, ISPAT Niketan 52/1A Ballygunge, Circulow Road, Calcutta 700019.

Reference Books:

14. S. N. Manohar, "Tall Chimneys: Design and Construction," Tata McGraw Hill Publishing Company Ltd., New Delhi, 1985.
15. E. H. Gaylord, C. N. Gaylord, and J. E. Stallmeyer, "Design of Steel Structures, 3rd Edition, Tata McGraw-Hill Education Pvt. Ltd., New Delhi, 2011

Course Plan:

Lecture No.	Topics Covered	Learning Objective	Chapter in TB	SLO
1-5	Types of loads, types of steel for various structural elements. Types of connections for structural framing, factor of safety, partial safety factors, load factors, steel vs. concrete, standard specifications, introduction to limit states and working stress design.	Study the different loads and load combinations for design of steel structures. Study the overview of different methods of design for steel structures.	TB, Ch.1 &2	(a), (f)
6-10	Determination of Plastic-collapse load, Conditions of Plastic Analysis, Methods of Plastic Analysis, Plastic Local Buckling of Plates, Cross-section classification, Behavior and Ultimate Strength of Plates, Design of Rigid Frames	Study the plastic analysis methods Study the local buckling of plates and its effect on overall strength of members	TB, Ch.4, RB#1, Ch.15	(a), (c)
11-15	Design Criteria, stresses in beams and permissible stresses, lateral stability of beams with unrestrained compression flanges, effective length of compression flanges and lateral bracings, secondary design considerations.	Design and detail the steel beams	TB (Ch.6)	(a), (c), (k)
16-20	Design of web, flanges, curtailment of flanges, connecting rivets, stiffeners, web and flange splices, economic depth of plate girders and Complete design of plate girder with and without tension field approach and detailing showing locations and geometry of intermediate and bearing stiffeners. .	Design and detail plate girders	TB (Ch.7)	(a), (c), (k)
21-24	Loading considerations, selection of gantry girders, crane girders, and Complete design procedure of gantry girder through example	Design and detail gantry girders	TB (Ch. 8)	(a), (c), (k)
25 - 30	General Behavior of Beam- Columns, Design of Beam-Columns through examples, Design of Eccentrically loaded Base Plate through examples	Design and detail beam-columns	TB (Ch.9)	(a), (c), (k)
31 - 35	Moment Resisting	Design and detail bolted and welded connections	TB,	(a), (c), (k)

	Frame Connections, Beam-to-Beam Connections, Beam and Column Connections, Continuous Beam-to-Column Connections		(Ch.10 & 11)	
36 -38	Selection of Roofing and Wall Materials, Selection of Bay Width, Structural Framing, Design of Purlins, Girts, Eave Strut, Plane Trusses, End Bearings, and Bracing of Trusses and Frames. Check for Stability of Frames under Primary Bending Moments, Bracing Requirements, Overall stability check when plastic hinges form	Design Industrial Building Systems:	TB (Ch.12 & 14), RB#1,	(a), (c), (k)
39 – 42	Composite Action, Advantages and Disadvantages of Composite Construction, Computation of Elastic Section Properties, Design Procedure using Load and Resistant Factor Design	Design a Composite Steel-Concrete Columns and Beams	TB (Ch.16), RB#1	(a), (c), (k)

⁺ It is mandatory for each student to have original IS-800:2007 code book and Steel Table.

***Student Learning Outcomes (SLOs):**

SLOs are outcomes (a) through (k) plus any additional outcomes that may be articulated by the program.

- (a) an ability to apply knowledge of mathematics, science and engineering
- (b) an ability to design and conduct experiments, as well as to analyze and interpret data
- (c) an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- (d) an ability to function on multidisciplinary teams
- (e) an ability to identify, formulate, and solve engineering problems
- (f) an understanding of professional and ethical responsibility
- (g) an ability to communicate effectively
- (h) the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
- (i) a recognition of the need for, and an ability to engage in life-long learning
- (j) a knowledge of contemporary issues
- (k) an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Evaluation Scheme:

Component	Duration	Weightage (%)	Date & Time	Nature of Component
Mid Semester Test	90 Min.	25%	----	CB
Assignments & Class Test	-	20%	Continuous	OB
Projects	-	20%	Continuous	OB
Comprehensive Exam	3 Hrs.	35%	----	OB

Chamber Consultation Hour: Thu 4:00 -5:00 PM at D104.

Notices: Notice concerning to the course will be displayed in CMS or Notice Board of CE Dept.

Make-up Policy: Makeup will be given only to the genuine cases (medical reasons) with prior permission.

Academic Honesty and Integrity Policy: Academic honesty and integrity are to be maintained by all the students throughout the semester and no type of academic dishonesty is acceptable.

INSTRUCTOR-IN-CHARGE
