FIRST SEMESTER 2023-24

Course Handout Part II

Date: 11-08-2023

In addition to part-I (General Handout for all courses appended to the time table) this portion gives further specific details regarding the course.

Course No. : FIN F414

Course Title : FINANCIAL RISK ANALYTICS & MANAGEMENT
Instructor-in-Charge : Thota Nagaraju (nagaraju@hyderabad.bits-pilani.ac.in)

Scope and Objective of the Course:

Textbooks:

- 1. John C. Hull, Risk Management & Financial Institutions, 4th Edition, Wiley
- 2. Credit Suisse Material

Reference books

- 1) Phillipe Jorion (2007). Value at Risk, 3rd Edition: The New Benchmark for Managing Financial Risk John C Hull (2015). Options, Futures, a nd Other Derivatives, 9th Edition
- 2) Michel Crouhy (2014). The Essentials of Risk Management, 2nd Edition. John C Hull (2012). Risk Management and Financial institutions, 3 rd Edition.
- 3) Advanced Engineering Mathematics by Erwin Kreyszig, 10th Edition
- 4) A First Course in Probability by Sheldon Ross
- 5) Introductory econometrics for finance" by Chris Brooks 2nd Edition
- 6) Basic Econometrics, Damodar Gujarati , Dawn Porter , and Sangeetha Gunasekar, 5th edition.

Course Plan:

Lecture No.	Learning objectives	Topics to be covered	Chapter in the Text Book
1	T .	and OLS,	
Sessions (9 Sessions)	Continuity; Differentiation (Chain, Product and Quotient Rule	Hetrosced asticity,	R5: Ch3, 4, 5, 6, 7, 8, 9
	Integrals (Definite and Indefinite); Sequences and series; Par	^{tial} Multicolli	R6: ch 5, 6 and 8
	derivatives; Measures of Central Tendencies and Dispersi		
	Skewness, Moments, Kurtosis; Random Variables (Discrete		
	continuous) Expectation and Joint Distribution; Discr	^{et} AR, AM,	
	probability distributions (Binomial, Poison and Multinomi	_{al)} ARIMA,	
	Normal Distribution; Ordinary Least Squares (Single	GARCH, and VAR	
	Multiple) & Maximum Likelihood Estimation; Relaxing C	LSModels	

Module 2: Introduction to Complete and Efficient Markets No. of Sessions: 3	assumptions (Heteroskedasticity & Autocorrelation); Dum and Qualitative Response Variable (Logit and Probit); AR, M ARIMA, VAR Models; ARCH, GARCH Models; pricing Forwards, Futures and Options. Banks & Risk Management, Capital regulation of bank, Va creation through risk management, financial risk systems, In this module, we will begin with the introduction to efficient ar omplete markets, which is the precursor for pricing of financial i uments based on arbitrage and risk neutral pricing. We begin with market on coin toss to demonstrate these concepts and drive hom e theory of arbitrage through the Arrow-Debreu securities. We the move from coin tosses to actual financial instruments of forward and options. We discuss the market efficiency and completeness to nderstand the no-arbitrage pricing and risk-neutral pricing.	IA, of lue No arbitrage pricing models	R2, R3 and Credit Suisse Material (1.1)
Module 3: Overvi Financial Markets a Asset Classes No. of Sessions: 6	uities and FX. We will start with different financial markets like	Financial Markets and Asset Classes	TB, R2, R3 and Credit Suisse Material (2)
Module 4a: Options a Greeks No. of Sessions: 3	In this module, we introduce a class of derivatives called Options risk measures associated with these options called Greeks. We we tart with definition and types of Options and then move on to disc the basic strategies and payoffs. We will learn about different programmer of generating theories for options like Binomial Option pricing and then disc about the Greeks and how they are utilized in risk management prices. We then cover about the trading of Greeks before we conclude this module with brief overview of basic exotic options. Simulation	i 1 u	TB, R2 & R3)
	"Normal random number generation; Evolution of spot us GBM; Finding the price of a bond; Duration hedging a sensitivity calculation; Option pricing using BSM, strike-pr profile, option pricing using Monte-Carlo; Implied Volatility an option; Implied Volatility vs Realized Volatility; De	and ice v of	Simulation Excel sheet will be shared

	hedging options"		
Module 4b: Forex Ri	sk Forex Risk Management		
Management	(Interest rate parity. PPP, Fundamental analysis; translation	FX risk	(TB, R2 & R3)
- Management	Economic exposure, transaction and hedging strategies.)	Mgmt	
	This module starts with a brief introduction to Risk, and highlig		
	various types of risks like market risk, credit risk, operational r		
	etc before going in detail of Market risk. We will also describe	r	
	and return concepts, measurement of various risks. We will intr		
	ce the most widely used industry standard called Value at Risk (V		
). We will then dive into the details of types of VaR and compare		(TB, R1, R2 & R3)
	ion with alternate risk measures. We then move on to the basics of		
	ditstorical Simulation model, underlying assumptions, various retu		
1 -	se)alculation methods and functions to capture the market risk. W	Dick (VaD)	
and Measures of Mar Risk	ket ill conclude this module by learning about the Responsive VaR r	n Models	
No. of Sessions: 3	el, understanding the Exponential Weighting and Expec		Simulation
No. of Sessions: 5	Shortfall approaches.		Excel sheet will be shared
	Followed by simulation Creating a hypothetical portfolio (FX, IR and EQ) a	and	Silaieu
	running the simulations on their prices/yield in terms	ind of	
	Parametric VaR; Historical Simulation VaR and Monte Ca		
	VaR (1000 simulations)		
	vare (1000 simulations)		
	This module builds on from the VaR concepts introduced in the		
	lier model and addresses the shortcomings of the basic VaR mo	de	
	like the distributional assumptions. We then discuss about the \ensuremath{g}		
	identified in VaR model in addressing the behaviour of market	7	
Module 6: Advance	tility called Volatility Clustering. We will introduce the reme	d Advanced	
VaR models	approaches like EWMA, GARCH to address these gaps and criti	Value at	TB, R2 & R3 and Credit Suisse
No. of Sessions: 6	y assess these methods from the practical and implemental	Models	Material (3.2)
	perspective. We will conclude this module by studying about the	•	
	incipal Component Analysis (PCA) which explains about the est		
	tion of VaR when there are multiple risk factors that are highly		
	related.		
Module 7: Credit Risk	In this module, we will introduce the concepts of Credit risk an	Probability	(TB, R2 & R3)
Modelling	s modelling. We cover the aspects like Credit Default risk, Cou	of Dofault	
No. of Sessions: 3	party credit risk and concentration risk before we move on to tl	Loss Given	
	arious metrics to quantify credit risk like Probability of Default	Default	

) and Loss Given Default (LGD). We finally close this module values a discussion on methods to mitigate credit risk such as risk base pricing, netting, collateral, covenants, diversification etc. Simulation Creating a hypothetical client (for example credit card) and bank. Compute the EAD and LGD of Client; Assume to Bank goes for insurance and they calculate the EAD from bank's perspective; insurance company perspective; do the calculation with and without netting; Compute the PD at finally compute the RWA for insurance and bank	d a hat ^(LGD) . om ese	Simulation Excel sheet will be shared
Module 8: Market Risk Regulatory Framework No. of Sessions: 3	This module gives the basic understanding of regulatory framew from the market risk perspective. We will begin with quantita aspects of Basel II market risk framework; cover various capita mponents like Regulatory VaR, Stressed VaR and Incremental F Charge (IRC). We then discuss about different regulatory mand d processes like back testing and associated details like definition f Trading PL and its components and also regulatory notificate and reporting exercises. We then finally close this module by he g an understanding about Limit Setting, Monitoring, RWA contained to the process of the process o	Regulatory VaR, Stressed VaR and Incremental Risk Charge (IRC).	TB, R2 & R3 And Credit Suisse Material (3.2)
Module 9: FRTB & CCAR & ERC No. of Sessions: 3	In this module, we cover about the evolving regulatory landscape and the future of risk management with the introduction of new ulations knowns as FRTB and CCAR. Having discussed the exigence of the earlier module, we will discuss the new regulations in detail and assess the scope and impact on the current fram ork and also the capital implications due to these regulations. Alwith these external regulatory requirements, we will also briefly uch upon the internal capital measures like Economic Risk Capital ERC) which will capture the exposures from the Economic persective rather than from an accounting view.	FRTB, CCAR and Economic Risk Capital (ERC)	TB, R2 & R3 and Credit Suisse Material (7.2)
Module 10: Dynamic Hedging and CAPM (Portfolio Risk Management for Individuals) No. of Sessions: 3	In the final module, we will conclude the key learnings of the e e course and have a working session on risk management throug ynamic hedging, understanding hedge ratios, costs, P&L related risk management. The course will end with rounding of risk management for an individual by using concepts of creating efficient prolios and maximizing risk return trade-off.	Dynamic n Hedging and	TB, R2 & R3 and Credit Suisse Material (6 & 7.2)

Component	Duration	Weighta ge (%)	Date & Time	Nature of Component
Ouizzos	Ten minutes	15%	Will be announced three days prior	
Quizzes	each quiz	15%	on CMS	CB
Group Assignment		20%	Second week of November 2023	OB
Mid-semester Exam	1.5hour	30%	11/10 - 11.30 - 1.00PM	СВ
Comprehensive Exam	3 Hour	35%	12/12 AN	СВ

*Note: No make-ups for the quizzes & Assignments.

All quizzes & assignments will be counted for final grade calculation.

Chamber Consultation Hour: Wednesday & Thursday 4:00 PM to 5:00 PM.

Group Assignment details will be shared on CMS by first week of October 2023. Assignment submission date: November 2nd week (Soft copy should be sent to nagaraju@hyderabad.bits-pilani.ac.in Post due date submissions will not be considered for evaluation and the entire group will be awarded zero marks in this component. Only 20 percent of the plagiarism is allowed and thereafter for every 10 percent of additional plagiarism, one mark (or ten points) will be deducted.

Academic Honesty and Integrity Policy: Academic honesty and integrity are to be maintained by all the students throughout the semester and no type of academic dishonesty is acceptable.
