

SECOND SEMESTER 2019-2020

Course Handout Part II

Date: 06-01-2020

In addition to part-I (General Handout for all courses appended to the time table) this portion gives further specific details regarding the course.

Course No. : CE F415

Course Title : DESIGN OF PRESTRESSED CONCRETE STRUCTURE

Instructor-in-Charge : Bahurudeen A

Scope and objective of the Course:

This course provides the basic and enhanced overview on design of pre-stressed concrete structures. Basic concepts of prestressing, types of prestressing systems and their analysis are discussed in the course. Additionally, the course enlightens design details for flexure, shear, torsion, composite sections and statically indeterminate structures. Principles and methods of optimization for prestressed concrete design are introduced. Relevant Indian Standard codes of practice will be given emphasis throughout lecture and tutorial sessions.

Course Level Objectives:

- **1.** On the completion of the course the learner will be able to choose choices of prestressing methods, recent systems and accessories relevant to any method for a given construction project.
- 2. On completion of the course the learner will be able to analyze different sections used in pestressed concrete construction.
- **3.** On completion of the course the student will be able to design and detail for flexure, shear and torsional reinforcement in varous section of prestressed concrete.
- **4.** On the completion of course the student will able to evaluate laws of prestressing, transimission of prestressing and durability of prestressed concrete structures.

Course Plan:

No. of Lectures	Learning Objectives	Topics to be covered	Chapter in the Text Book	SLO
1-3	Describe the importance and significance of prestressing. Discuss the evolution of prestressing techniques with time.	Basic Concept; Early Attempts of Prestressing	1, T1	(h),(j)
4-6	List the various types of prestressing techniques. Recommend suitable prestressing techniques for various structural applications. Explain the limitations of prestress techniques. Describe the merits of prestressing over the conventional reinforcement design.	Effect and Source of Prestressing Types of Prestressing; Partial prestressing Limitations of Prestressing Advantages of Prestressing	1, T1	(a)
7-9	List different accessories used in prestressing concept	Prestressing steel and concrete for construction. Materials and accessories used in prestressed concrete construction.	2, 3 T1	(c)
10-15	Outline the basic assumptions used in presetressing applications. Analyse prestressed concrete members. Solve and find out the cracking moments in prestressed members under specific loadings.	Elastic flexure analysis, Basic assumptions; Analysis; Resultant stresses; stresses in tendons; Cracking Moment	4, T1	(h), (e)

23-24 Carry out Flextural design based on concrete stress limits Magnel method of flexural design 7, T1 (c) 23-24 Perform Flextural design based on Load balancing concept Load balancing method 4, T1 (c) 23-24 Perform Flextural design based on Load balancing method 4, T1 (c) 23-25 List and examine the different components of shear resistance Describe the sequential design steps for prestressing . 25-31 Describe the sequential design steps for prestressing . Examine the effects of pure torsion on a prestressed concrete member Summarize the concept of pure torsion and extend the theory to explain the failure modes Discuss in detail the limit state of collapse for torsion. 32-36 Illustrate transmission of prestress in a structural concrete member Define bond stress and explain the concept of transmission length List the various types of deflections that occur in prestressed concrete transmission deflections that occur in prestressed concrete transmission of prestressed concrete transmission deflections that occur in prestressed concrete transmission of the prestressed concrete transmission deflection due to Prestressing Force; Deflec	16-20	Define the phenomenon of elastic shortening. Describe the various prestressing losses and explain the reasons for them.	Losses due to prestress Elastic Shortening; Anchorage Slip; Creep of Concrete; Shrinkage of Concrete; Relaxation of Steel; Total Time-dependent Loss	5, T1	(k),(a)
23-24 based on Load balancing concept List and examine the different components of shear resistance Describe the sequential design steps for prestressing. Examine the effects of pure torsion on a prestressed concrete member Summarize the concept of pure torsion and extend the theory to explain the failure modes Discuss in detail the limit state of collapse for torsion. Thustrate transmission of prestress in a structural concrete member Define bond stress and explain the concept of transmission length List and examine the different components of Shear diagonal tension and web reinforcement: Components of Shear Resistance; Design of Transverse Reinforcement; Design Steps 8, T1 Crack Pattern Under Pure Torsion Components of Resistance for Pure Torsion; Modes of Failure; Effect of Prestressing Force Limit State of Collapse for Torsion; Design and Detailing Requirements 8, T1 (a), (k), (b), (c) (a), (c) (b), (c) (c) (c) (c) (d) (e), (l) (e) (e) (e) (e) (e) (e) (e)	21-22	Carry out Flextural design based on concrete	Magnel method of flexural design	7, T1	(c)
different components of shear resistance Describe the sequential design steps for prestressing. Examine the effects of pure torsion on a prestressed concrete member Summarize the concept of pure torsion and extend the theory to explain the failure modes Discuss in detail the limit state of collapse for torsion. Illustrate transmission of prestress in a structural concrete member Define bond stress and explain the concept of transmission length List the various types of deflections that occur in prestressed concrete in the various types of deflections that occur in prestressed concrete in the shear Resistance Spagn of Transverse Reinforcement; Design of Transverse Reinforcement; Design Steps 8, T1 8, T1 8, T1 (e), (I) (e), (I) (a), (I) (b), (I) (c) (a), (I) (b), (I) (b), (I) (c) (c) (c) (a) (b) (a) (b) (c) (c) (b) (c) (c) (c) (c	23-24	based on Load balancing	Load balancing method	4, T1	(c)
Examine the effects of pure torsion on a prestressed concrete member Summarize the concept of pure torsion and extend the theory to explain the failure modes Discuss in detail the limit state of collapse for torsion. Illustrate transmission of prestress in a structural concrete member Define bond stress and explain the concept of transmission length List the various types of deflections that occur in prestressed concrete member Crack Pattern Under Pure Torsion Components of Resistance for Pure Torsion; Modes of Failure; Effect of Prestressing Force Limit State of Collapse for Torsion; Design and Detailing Requirements 8, T1 Design and Detailing Requirements 9, T1 length, Anchorage Zone. (a), (k), (a), (b), (b), (c) Prestressing Force Limit State of Collapse for Torsion; Design and Detailing Requirements Occurrence Limit State of Collapse for Torsion; Design and Detailing Requirements 8, T1 Design and Detailing Requirements Define bond stress and explain the concept of transmission length List the various types of deflections that occur in prestressed concrete Torsion; Modes of Failure; Effect of Prestressing Force Limit State of Collapse for Torsion; Design and Detailing Requirements 8, T1 Define bond stress and development length, Anchorage Zone. 9, T1 (a), (l)	25- 31	different components of shear resistance Describe the sequential design steps for	reinforcement: Components of Shear Resistance; Design of Transverse Reinforcement; Detailing of shear	8, T1	(e), (k)
Illustrate transmission of prestress in a structural concrete member Bond stress, transfer and development length, Anchorage Zone. 9, T1 (a), (I) Define bond stress and explain the concept of transmission length List the various types of deflections that occur in prestressed concrete prestressed concrete and development length, Anchorage Zone. Deflection due to Gravity Loads; Deflection due to Prestressing Force;	32-36	Examine the effects of pure torsion on a prestressed concrete member Summarize the concept of pure torsion and extend the theory to explain the failure modes Discuss in detail the limit state of collapse for	Components of Resistance for Pure Torsion; Modes of Failure; Effect of Prestressing Force Limit State of Collapse for Torsion;	8, T1	(a), (k), (e)
deflections that occur in Deflection due to Prestressing Force;	37-39	Illustrate transmission of prestress in a structural concrete member Define bond stress and explain the concept of	· · · · · · · · · · · · · · · · · · ·	9, T1	(a), (k)
members and explain the reasons. Calculation of Crack Width and Limits of Celection, Calculation of Crack Width and Limits of Celection, Celec	40-42	List the various types of deflections that occur in prestressed concrete members and explain the	Deflection due to Prestressing Force; Total Deflection; Limits of Deflection; Calculation of Crack Width and Limits	6, T1	(e), (a)

*Student Learning Outcomes (SLOs):

SLOs are outcomes (a) through (k) plus any additional outcomes that may be articulated by the program.

- (a) an ability to apply knowledge of mathematics, science and engineering
- (b) an ability to design and conduct experiments, as well as to analyze and interpret data
- (c) an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- (d) an ability to function on multidisciplinary teams
- (e) an ability to identify, formulate, and solve engineering problems
- (f) an understanding of professional and ethical responsibility
- (g) an ability to communicate effectively
- (h) the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
- (i) a recognition of the need for, and an ability to engage in life-long learning
- (j) a knowledge of contemporary issues
- (k) an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Evaluation Scheme:

Component	Duration	Weightage (%)	Date & Time	Nature of Component
Mid Semester Test	90 min	25	4/3, 3.30 - 5.00 PM	Closed Book
Surprise Quiz	-	10	Continuous	Closed Book
Term project and presentation		10 (OB)	Continuous	Open Book
Take Home Assignments		15 (OB)	Continuous	Open Book
Comprehensive Exam	180 min	40	08/05 AN	Closed book

Chamber Consultation Hour: Thursday 4:00 -5:00 pm

Academic Honesty and Integrity Policy: Academic honesty and integrity are to be maintained by all the students throughout the semester and no type of academic dishonesty is acceptable.

Notices: Notices will be displayed on the Notice Board of Civil Engineering Department and Google class room of the course.

Make-up Policy:

- 1. Prior permission is mandatory in genuine cases. Applications (preferably email/hardcopy) received 24 hours after (in case of medical emergencies) the test will not be entertained. Applications on informal forums will be ignored.
- 2. Medical emergencies have to be supported by valid certificates to satisfaction of I/C.
