In addition to Part I (General Handout for all courses appended to the time table) portion:

Course Number : MATH F420

Course Title : MATHEMATICAL MODELING

Instructor-In charge: Santanu KoleyInstructors: Santanu Koley

1. Scope and objective of the course:

This course introduces students to fundamentals and various approaches of mathematical modeling applicable to physical systems. This course covers most of the basic aspects of modeling from theory to the application part. A wide variety of mathematical approaches associated with the modeling that are covered in the course can be characterized into statistical models and mechanistic models. This course is interdisciplinary in nature and each topic is followed by many examples from different disciplines like biology, physics and engineering. This course provides detailed concepts and framework to model and solve various physical problems arise in different branches of science and engineering.

2. Text Books:

- 1. Edwards and Penney, Elementary Differential Equations with Boundary Value Problems, Pearson Edu. Inc., Sixth Edition.
- 2. Steven M. Kay, Fundamentals of Statistical Signal Processing: Estimation Theory, Prentice Hall, 1993

3. Reference Books:

- 1. Kai Velten, Mathematical Modeling and Simulation; Introduction for Scientists and Engineers, WI-LEY-VCH, 2009.
- 2. Adriaan van den Bos, Parameter Estimation for Scientists and Engineers, Wiley Pub, 2007.

4. Lecture Plan:

Lecture	Learning Objectives	Topics to be covered	Chapter in the Text Book
1-2	To learn basic	Basic concepts of Systems and	1.1-1.7 (R1)
	concepts behind	Models; Classification of	
	mathematical	mathematical models; Introductory	
	modelling	examples from various fields.	
3-6	To learn the	Population Modelling: Linear Model,	7.1,7.4 (T1)
	mathematical	Nonlinear Model and Predator- Prey	
	concepts and	Model	
	associated		
	formulation of the		
	population modelling.		
7-8	To learn the concepts	Equilibrium solutions and stability of	7.1 (T1)
	of equilibrium	ordinary differential equation with an	
	solution and stability	example of harvesting and stocking in	
	of ODE	non-linear population modelling.	
9-14	To gain knowledge on	Linear Autonomous System,	7.2-7.3 (T1)
	linear autonomous	Eigenvalues and Eigenvectors,	
	system and its	Solution methodologies with real life	
	applications to real	examples, sketching solutions and	
	life problems.	analyse the system.	
15-23	To gain knowledge on	Nonlinear autonomous system,	7.4-7.5 (T1)
	nonlinear autonomous	analysis of critical points, linearization	
	system and its	of the system around the critical	

1		
* *		
life problems.	analyse the system.	
To learn the	Estimation Theory with Application to	1-2, 7.1-7.5 (T2)
application of	Wireless Sensor Networks: Basics-	
estimation theory in	Sensor Network and Noisy	
real engineering	Observation Model, Framework of	
problems	Estimation, Estimation of complex	
-	parameters, Estimation of channel	
	coefficient, Complex baseband	
	channel coefficient.	
To determine the	Cramer Rao Bound (CRB) for	3.1-3.6 (T2)
minimum variance	parameter estimation with examples	
achievable by an	from Wireless Sensor Network	
unbiased estimator		
To learn the vector	Framework for vector parameter	3.7, 7.8, 8.1-8.3 (T2)
parameter estimation	estimation, System Model for Multi	
and its application to	Antenna Downlink Channel	
wireless	Estimation, Likelihood Function and	
communication	Least Squares Cost Function for	
system	Vector Parameter Estimation	
To learn least square	Least square solution of ML estimate	8.4-8.7 (T2)
estimate of vector	of the vector parameter, properties of	
parameter and its	least square estimate, Least Squares	
application to wireless	Multi Antenna Downlink Maximum	
communication	Likelihood Channel Estimation,	
system	Multiple Input Multiple Output	
	(MIMO) Channel Estimation with	
	example	
	application of estimation theory in real engineering problems To determine the minimum variance achievable by an unbiased estimator To learn the vector parameter estimation and its application to wireless communication system To learn least square estimate of vector parameter and its application to wireless communication system	To learn the application of estimation theory in real engineering problems To determine the minimum variance achievable by an unbiased estimation to learn the vector parameter estimation and its application to wireless To learn least square estimate of vector parameter and its application to wireless communication system To learn the vector parameter and its application to wireless communication system To learn to least square estimate of vector parameter and its application to wireless communication system To learn to least square estimate of vector parameter and its application to wireless communication system To learn least square estimate, Least Squares of the vector parameter, properties of least square estimate, Least Squares communication, system Multiple Input Multiple Output (MIMO) Channel Estimation with examples for vector parameter, properties of least square estimate, Least Squares with Application to to Wireless Sensor Network and Noisy Passics—Sensor Network of complex parameters, Estimation of channel coefficient. Cramer Rao Bound (CRB) for parameter estimation with examples from Wireless Sensor Network Antenna Downlink Channel Estimation, Likelihood Function and Least square solution of ML estimate of the vector parameter, properties of least square estimate, Least Squares Multi Antenna Downlink Maximum Likelihood Channel Estimation, with

5. Evaluation Scheme:

Evaluation	Duration	Weightage	Date & Time	Nature of Component
Component				
Quiz 1	To be announced in	10%	To be announced in the	Open Book
	the class		class	
Mid Semester	90 mins	30%	16/03 11.30 - 1.00PM	Open Book
Test				
Quiz 2	To be announced in	10%	To be announced in the	Open Book
	the class		class	
Assignment 1	To be announced in	10%	To be announced in the	Open Book
	the class		class	
Comprehensive	180 mins	40%	15/05 AN	Open Book
Examination				

- **6. Chamber consultation hour:** To be announced in the class.
- **7. Notices:** The notices concerning this course will be displayed on the CMS Notice Board only.
- **8. Make-up Policy**: Make-up will be given only for very genuine cases and prior permission has to be obtained from the I/C.

Academic Honesty and Integrity Policy: Academic honesty and integrity are to be maintained by all the students throughout the semester and no type of academic dishonesty is acceptable.
