

06/01/2019

In addition to Part I (General Handout for all courses appended to the time table) portion:

Course Number : MATH F113

Course Title : PROBABILITY & STATISTICS

Instructor-In charge : Manish Kumar

Instructors: D K Satpathi, B Mishra, K Venkata Ratnam, PTV Praveen Kumar, Manish Kumar,

J.Jaganmohan, Sumit Kumar V, Santanu Koley, G Murali Mohan Reddy, Debopam Chakraborthy, Nirman Ganguly, Sabyasachi Dey, A. Kartik, Basu Debananda, T. Ranjan Panigrahi, Tusharakanta Pradhan, Sanjay Mandal, N.S. Gopal,

Agrawal Amarkumar Shyamsunder, Tapaswini Patro

1. Scope and objective of the course:

Probability theory deals with many real-life problems, which either inherently involve the chance phenomena or describing the behaviour of the system explicitly with statistical properties. Interpretation of the system behaviour in many engineering and sciences depends on concept of probability and statistics that familiarize with the computational and analytical aspects. The course deals with the basic properties of various distributions and other related things.

2. Text Books:

Jay L Devore, Probability and Statistics for Engineering and the Sciences, 8th Edition, Cengage Learning, 2012.

3. Reference Books:

- 1. Johnson, R.A.: Miller & Freund's Probability and Statistics for Engineers, 8th. Ed., Pearson, 2011.
- 2. Sheldon M. Ross: Introduction to Probability and Statistics for Engineers and Scientists, Fourth Edition, Elsevier, Academic Press, 2010.
- 3. Walpole, R.E., Myers R.H., Myer S.L., Ye K.: Probability and Statistics for Engineers and Scientists, 8th Edition, Pearson Education, 2008.

4. Lecture Plan:

Lecture	Learning Objectives	Topics to be covered	Chapter in
			the Text Book
1-3	Probability theory makes predictions about experiments whose outcomes depend upon chance. How to state the three axioms of probability and use them to derive basic facts about a probability function. Learn about three approaches of defining probabilities and their interpretations. Introduce conditional Probability and its applications	Introduction to probability, sample spaces and events, Axioms, Interpretations and Properties of Probability, Counting Techniques(Self Study), Conditional Probability, Independence.	2.1-2.5
4-6	To gain knowledge on how to define a random variable and identify various important and commonly used discrete	Random Variables, Probability Distributions for Discrete Random Variables, Expected Values, Moment Generating Function (MGF)	3.1, 3.2, 3.3, 5.11 (R-1)
7-10	distributions.	The Binomial Probability Distribution, Hypergeometric and Negative Binomial Distributions, Geometric Distribution, The Poisson Probability Distribution	3.4, 3.5, 3.6
11-13	To gain knowledge on various	Continuous Random Variables,	4.1, 4.2,

		- 1 1 d	
	important and commonly used	Probability Density Functions,	5.11(R-1)
	continuous distributions	Cumulative Distribution Functions and	
		Expected Values, MGF	
14-18	To gain knowledge on most	The Normal Distribution, The Exponential	4.3, 4.4, 4.5,
	important continuous distribution	and Gamma Distributions, Chi-Square,	6.7 (R-1)
	(Normal distribution) and its	Log Normal Distributions and	
	applications in real life.	Transformation Methods to Obtain	
		Distributions.	
19-20	Introduce simulation and how to	Simulation – Discrete and Continuous	4.10,
	simulate complex systems.	random variables	5.14 (R-1)
21-23	Develop probability models	Jointly Distributed Random Variables,	5.1, 5.2
	involve several random variables	Expected Values, Covariance, and	
	simultaneously	Correlation	
24-26	Introduce Statistics and their	Statistics and Their Distributions, The	5.3, 5.4, 5.5
	distributions.	Distribution of the Sample Mean, The	
		Distribution of a Linear Combination	
27-28	How to estimate population's	Some General Concepts of Point	6.1, 6.2
	parameters.	Estimation, Methods of Point Estimation	
29-32		Basic Properties of Confidence Intervals,	7.1, 7.2, 7.3,
		Large-Sample Confidence Intervals for a	7.4
		Population Mean, and Proportion Intervals	
		Based on a Normal Population	
		Distribution, Confidence Intervals for the	
		Variance and Standard Deviation of a	
22.25	Introduce concents of hypothesis	Normal Population	8.1, 8.2
33-35	Introduce concepts of hypothesis testing and its applications in real	Hypotheses and Test Procedures, Tests	0.1, 0.2
36-38	world problems	About a Population Mean Tests Concerning a Population Proportion,	8.3, 8.4
30-30	world problems	P-Values	0.5, 0.4
39-41	Objective is how to exploit the	The Simple Linear Regression Model,	12.1-12.2
39-41	relationship between two or more	Estimating Model Parameters	12.1-12.2
	variables by introducing	Louinding Woder Farameters	
	predictive models.		
	predictive illoueis.		

5. Evaluation Scheme:

Evaluation Component	Duration	Weightage	Date & Time	Nature of Component
Quiz 1	To be announced in the class	10%	To be announced in the class	Closed Book
Mid Semester	90 mins	35%	2/3 9.00 - 10.30AM	Open book
Quiz 2	To be announced in the class	10%	To be announced in the class	Closed Book
Comprehensive Examination	3 Hours	45%	01/05 FN	Closed Book

^{*} The total marks of all the components, taken together will be 300.

- **6. Chamber consultation hour:** To be announced in the class.
- **7. Notices:** The notices concerning this course will be displayed on the CMS Notice Board only.
- 8. Make-up Policy:

Make-up will be given only for very genuine cases and prior permission has to be obtained from the I/C.

Academic Honesty and Integrity Policy: Academic honesty and integrity are to be maintained by all the students throughout the semester and no type of academic dishonesty is acceptable.
